

Demo Retail Policies

Cancellation, refunds, payments, privacy, and escalation | Searchable support knowledge-base sample

Illustrative content for agent testing. The organization and examples are Amazon-inspired, but these rules are not exact Amazon terms, are not approved by Amazon, and are not approved company policy.

Purpose

This sample gives a retail support agent direct, retrievable answers for five policy topics that may otherwise be missing from its knowledge base. Each topic has its own page and customer-style Q&A; pairs to support PDF text extraction and retrieval.

Use in a demo

Treat these as example business rules only. Replace them with your organization's approved terms before production. For a specific order, use the order record and available tools. Do not say a cancellation, refund, or escalation is complete until the system confirms it.

Security rule for all topics: never ask the customer to send a password, one-time passcode, full card number, card security code, or UPI/payment PIN in chat.

Topics

1. Cancellation
2. Refunds
3. Payments
4. Privacy
5. Escalation

Reference basis

The cancellation and payment examples were informed by public Amazon India shopping guidance and Amazon Pay information. Privacy examples were informed by the public Amazon.in Privacy Notice. Refund and escalation details here are simplified demo rules, not copied Amazon terms.

1. Cancellation

Order cancellation

Q: How do I cancel an order?

A: Open Your Orders, select the item, and choose Cancel items if that option is available. Eligibility depends on the order status. Follow the confirmation shown in the account.

Q: Can I cancel an order after it has shipped?

A: Check Your Orders for Request Cancellation. If the option is not available, contact customer support to review the next steps for that order. Do not assume a cancellation is complete until the order status confirms it.

Q: Can the support assistant cancel my order?

A: The assistant cannot cancel or modify an order itself. It can explain where to check the cancellation option and route an unresolved request to a human support agent.

Q: What happens if the cancellation request is declined?

A: The order remains active unless the order page shows otherwise. Contact support for available options. If the item is delivered, any return request is handled under the return policy.

Agent boundary: provide the self-service steps, check available order status, and route account changes or unresolved exceptions to a human.

2. Refunds

Refund eligibility and status

Q: When will I receive my refund?

A: After an eligible return or cancellation is approved, the refund is initiated. The time for funds to appear can vary by payment method and provider. Check the refund status for the order; this sample does not promise a fixed number of days.

Q: Where will my refund be sent?

A: For a prepaid order, the refund is sent to the original payment method unless the order page offers and confirms another refund option. The refund details shown for that order are the source of truth.

Q: Why is my refund amount different?

A: The amount can depend on the items and charges included in the approved return or cancellation. Review the refund breakdown for the order. If a line item is unclear or appears incorrect, contact support with the order ID.

Q: My return is complete but I do not see a refund. What should I do?

A: Check the return and refund status in the account. If the refund is marked issued but has not appeared after the displayed estimate, contact support or the payment provider with the order ID and refund reference.

Q: Can the assistant issue a refund?

A: No. The assistant can explain the documented process and check status if an approved tool is available, but it cannot move money or promise approval.

Do not invent refund amounts, eligibility decisions, or posting dates. Use the order record and the current refund status.

3. Payments

Checkout methods and payment problems

Q: What payment methods can I use?

A: The checkout page shows payment methods available for the specific order. Examples may include UPI, debit or credit cards, net banking, wallet balance, or Pay on Delivery where offered. Availability can vary by order, seller, address, and account.

Q: My payment failed, but my account was debited. What should I do?

A: Check the order and payment status before trying again, to avoid an accidental duplicate payment. If the debit remains unresolved, contact support or your bank with the order ID and transaction reference. Never share payment credentials in chat.

Q: Can I change the payment method after placing an order?

A: Use the order page to see whether a payment update is available. If it is not shown, contact support. The assistant cannot edit payment details or charge a different method.

Q: Can I pay by installments or use a credit option?

A: Only use an installment or credit option if it is displayed for the order at checkout. Review the provider, eligibility, fees, and repayment terms shown there. The assistant should not infer approval or quote terms that are not displayed.

Payment safety: never request a password, one-time passcode, UPI PIN, full card number, or card security code.

4. Privacy

Personal information and customer controls

Q: What personal information may be used for my order?

A: A retail service may use contact and delivery details, order information, and payment transaction details to process purchases, deliver orders, provide support, maintain an account, and protect against fraud. Ask only for information needed to help with the customer's issue.

Q: Is my personal information shared?

A: Information may be shared with a seller or service provider when needed to fulfil an order, process a payment, deliver a package, or provide support. Refer the customer to the service's full privacy notice for details about other uses and disclosures.

Q: How can I review or update my personal information?

A: Use the account settings and privacy controls provided by the service. For a formal access, correction, deletion, or privacy complaint request, contact support through the official help channel.

Q: What does the assistant do with information in chat?

A: The assistant masks names, email addresses, phone numbers, payment-card numbers, and street addresses before workflow processing. Its logs are intended to contain redacted message content. Do not claim that this describes every storage or retention practice.

Privacy boundary: the sample describes limited handling rules, not a complete legal privacy notice. Confirm the organization's collection, sharing, retention, security, and customer-rights terms before production use.

5. Escalation

When a human agent should take over

Q: When will my request be escalated?

A: A human agent may take over when an order cannot be found, a tool fails, a payment is disputed, fraud or account compromise is suspected, a policy exception needs review, or the assistant cannot safely resolve the request.

Q: What happens after escalation?

A: The assistant creates a support ticket when the handoff system is available and provides the ticket reference returned by the system. A human agent reviews the case and follows up using the contact method on file.

Q: Can you guarantee when a human will respond?

A: No response time is promised in this sample policy. Check the ticket or official support channel for updates.

Q: Should I send sensitive information so the agent can help?

A: Share only the order ID and relevant non-secret details requested by the official support flow. Do not send passwords, one-time codes, full payment-card numbers, card security codes, or payment PINs.

Q: What if I still need help after the assistant answers?

A: Ask the assistant to connect you to support or request escalation. If a ticket is created, keep the ticket reference for follow-up.

Agent boundary: escalate sensitive, unresolved, exceptional, and tool-failure cases. State only the ticket status and reference actually returned by the handoff system.
